

Lesson 1.2 Rays and Angles

In the figure at right, you can see there are three angles with the same vertex. The common vertex is A.

When you have more than one angle at a vertex, use three points to name an angle. The vertex is always the middle letter. You can also refer to the angle with a number.

For example, you can name the angle $\angle 8$ as $\angle DAE$ or $\angle EAD$. You can name angle $\angle 9$ as $\angle EAB$ or $\angle BAE$. The third angle in the figure to the right is $\angle DAB$, or $\angle BAD$.

Complete the following. The first answer is given.

1. angles: $\angle NLM$ $\angle MLN$ $\angle L$ $\angle 4$

vertex: L sides: \overline{LM} \overline{LN}

rays: \overrightarrow{LM} \overrightarrow{LN}

2. angles: _____

vertex: _____ sides: _____

rays: _____

3. Name the angles that have A as their vertex.

4. Name the sides of $\angle EAC$.
